

A.I. Young Sire Listing

All Young Sires are ranked on Protein based on their Genomic evaluation if available (Eval = G) or their Parent Average within their 6-month-period sampling group. Parent Averages are computed by adding half the value of the sire's PTA for each trait to half the value of the dam's PTA. Testing results are best when a group of young sires are sampled rather than heavy use of a few individual bulls.

Each performance summary book will list bulls sampled in the last two years. After two years, a bull will no longer appear on the list. This procedure provides an even distribution of sampling for many different young sires which will improve genetic progress by increasing the average reliability and help identify the truly superior bulls in the group. This listing to be updated at six-month intervals with the January and August booklets

Group I - Sampling Date after 7-1-2009
